

Do you have experience with heart failure?

Help shape research on heart failure and diet as a Research Buddy

Our team is exploring how the food we eat affects the gut, and why this may be important for people living with heart failure. Our goal is to develop new dietary therapies that improve health and everyday life for people with heart failure.

We are seeking Research Buddies with lived experience of heart failure to help guide this research and make sure it reflects what matters most to patients and their families.

What am I expected to do?

We are looking for Research Buddies who can:

- Share your lived experience by taking part in meetings or workshops
- Review project documents and research plans
- Help ensure our research matches the needs and priorities of people affected by heart failure

What skills/experience do I need?

No prior experience in research or consumer involvement is necessary. We are looking for people who:

- Live with heart failure, or care (or have cared) for someone who does
- Are willing to take part in discussions and share honest feedback

You might be a great fit if you...

- Have personal or family experience of heart failure
- Are interested in food, nutrition or gut health and want to help develop new dietary treatments
- Are happy to share your perspective openly with researchers
